Nylon 12™

The new FDM material Nylon 12™ is a semi-crystalline thermoplastic. It offers up to five times greater resistance to breaking and better impact strength compared to even the strongest FDM materials. It has high fatigue resistance and strong chemical resistance. Nylon 12 is primarily used in aerospace, automotive and consumer goods industries to take on everything from tooling, jigs and fixtures to covers, panels and vibration resistant components. Unparalleled toughness and a simple, clean process – free of powders.
